Creating a world of learners through innovative IT services and business solutions

Knowledge Universe Technologies™, a Knowledge Universe® (KU) company, is a technology services provider delivering innovative business solutions to customers in the early childhood and school-age education and care industries.

Serving Knowledge Universe

At KU Technologies, we continually explore how technology and services can create new and better ways for educators, child care providers and students to work and learn. Every day, we partner with our largest customer, Knowledge Universe, to help them create more manageable IT environments that cost less to operate and deliver more value to the business and the customers they serve.

Serving early childhood and school-age education and care providers

KU Technologies is also changing the way independent education and child care providers do business. In January 2010, we launched the Child Care Marketplace to help education professionals save money on quality products and food selections; and OnCare™ Services, a division of KU Technologies, helps center owners and school administrators simplify work and better manage their business. Because every center, every school is unique, OnCare's web-based center management solutions are scalable and customizable. That can mean creating a functional website, speeding communications between directors and families, automating business tasks, integrating IT environments with food and subsidy providers, or enabling online tuition processing.
